Killer 1535 Disabled/Disconnected
2020/02/06

Recently i ran into issues with my Alienware 17 R3, i downloaded and installed an Nvidia driver for the gpu in the alienware graphics amplifier i recently purchased. I did this while at the shop where Windows 10 was reinstalled and everything worked fine, while the graphics amplifier plugged in and when it wasn't, i took them home and hooked everything up expected everything to run smoothly but was greeted with the inability to connect to a wireless network. I ran windows troubleshooter (Which i feel is useless for the most part) and i was told to plug in an ethernet cable, which i neither have nor want to use. I've tried installing the drivers again and again. The most interesting part is that the network adapter will not show in device manager unless i select show hidden items, it then comes up grayed out and cannot be enabled, when i select properties it says that the device is disconnected which i know for certain is not the case, considering i handled it with care and have never dropped it. Im really bummed that it's basically out of comission and would really appreciate any recommendations on how to solve this issue.
