Laptop can't detect own wifi, but phone can  
2020/05/28

I've been connected to my wifi at home before, but it suddenly threw me off the network one day and I can't find it anymore while it can detect other wifi networks. My phone can connect just fine, as can other new devices. Meaning it isn't hidden. I rebooted my router and laptop, I typed in the ssid manually, I reinstalled the driver, I went from "802.11b" to "802.11b/g", I changed my channel from "auto" to "20Mz Only", I reset my laptop to factory settings..Basically, I did everything I could find online and nothing works. I really need help with this. This was an expensive laptop and I don't want to go buy another one while this one works so good (at least when it has wifi)
