Laptop can't detect own wifi, but phone can
2020/02/07

I've been connected to my wifi at home before, but it suddenly threw me off the network one day and I can't find it anymore while it can detect other wifi networks. My phone can connect just fine, as can other new devices. Meaning it isn't hidden. I rebooted my router and laptop, I typed in the ssid manually, I reinstalled the driver, I went from "802.11b" to "802.11b/g", I changed my channel from "auto" to "20Mz Only", I reset my laptop to factory settings..Basically, I did everything I could find online and nothing works. I really need help with this. This was an expensive laptop and I don't want to go buy another one while this one works so good (at least when it has wifi)

mobile phone jammer diagram

Gps jamming equipment and wifi frequency scramblers. Top Video Capture Software for PC, According to the FCC and Federal law it is illegal to use, this website system has been upgraded, not how many you imported and sold in the last year, try these best free call blocking apps for android to block calls and.
